

## TOGETHER, LET'S TAKE CARE OF WATER

Naleczów, October 29, 2024

I will continue my efforts to make responsible management a priority for NW Poland, Division in Naleczów, by sustainably managing and protecting the region's water resources.

We are developing a collective action plan that will benefit the surface water and groundwater bodies in our impluvium, while aligning with the orientations of regional and local management plans.

Each year, we provide our key stakeholders with a summary of our actions and progress to improve AWS's responsible water management performance.

I also undertake to take all steps within my power to ensure that the NW Poland, Division in Naleczów allocates the human and financial resources required to implement the AWS standard and maintain it over the long term. The site will implement and report on the progress of the water stewardship programme(s) to improve the five AWS water stewardship outcomes: good water governance, sustainable water balance, good water quality status, important water-related areas and water, sanitation and hygiene for all (WASH).
